OpenHarmony is the main project being led by the OSTC in Europe at the moment, but the effort is spreading across different and heterogeneous initiatives.

OpenHarmony is an open-source project that is laying the groundwork for a future where all devices connect to each other, creating a seamless and efficient ecosystem.

WHAT IS OSTC?
OSTC acronym for Open Source Technology Center, the Huawei European technology hub that is developing and spreading the OpenHarmony project in overseas markets and aims to become a trusted contact for communities, innovation hubs and companies, startups, public administration.

WHAT IS OPEN HARMONY?
OpenHarmony is an open-source project launched by Huawei with the aim of embracing the promise of a versatile and all-scenario intelligent ecosystem.

WHAT WILL OPEN HARMONY REVOLUTIONIZE THE WAY SMART DEVICES ARE DESIGNED?
We are facing a world with an exponential growing number of devices that are becoming more and more isolated and fragmented.

WHAT IS OPEN HARMONY?
OpenHarmony is the open-source technology baseline designed to provide device makers with one common technology.

HarmonyOS is the commercial version of OpenHarmony.

OPENHARMONY VS HARMONY OS
The operating system is the enabling key factor for this new scenario all under the signature of open source technology.

OpenHarmony is bridging to a new IoT frontier where whatever you can imagine as connected together you can imagine to do it transcending the traditional relation between devices and operating system.

THE REVOLUTION RESIDES IN TRUE OPEN SOURCE
The operating system is the enabling key factor for the new scenarios all under the signature of open source technology.

OpenHarmony is laying the groundwork for a future where all devices connect to each other, creating a seamless and efficient ecosystem.

THE REVOLUTION REIDES IN TRUE OPEN SOURCE
The operating system is the enabling key factor for this new scenario all under the signature of open source technology.

How will OpenHarmony revolutionize the way smart devices are designed?
We are facing a world with an exponential growing number of devices that are becoming more and more isolated and fragmented. What we are looking at is an all-scenario intelligent ecosystem concept where the limit is no more related to each device features or architecture, but instead real-time and open cooperation between devices is the innovative concept at the base of OpenHarmony.

So imagine efficient and secure cross-devices connectivity where a phone is going to become a smart digital hub to share information, data, capabilities, etc with all of your devices that are around you.
